# Evaluation Results

## **SYSTEMS EVALUATED**

This report covers the fourth quarter of Fiscal Year 2020, from July 1 to September 30, 2020. The Mobile Irrigation Lab (MIL) completed 25 total evaluations, all of which were initial evaluations. All 25 evaluations were performed on microjet systems on citrus.

## **RESULTS**

Agricultural system evaluations are rated based on the measured Emission Uniformity (EU) of systems. The average EU of the agricultural systems evaluated was 86%.

## **WATER SAVINGS**

Potential Water Savings (PWS) are based on first-time evaluations and estimate the amount of water that would be saved each year by making the recommended system improvements and/or following recommended irrigation scheduling guides. Actual Water Savings (AWS) are calculated from system improvements measured by follow-up evaluations.

**PWS: 37.6 million gallons (115.7 acre feet) per year.**

**AWS: 0.0 million gallons (0.0 acre feet) per year.**

# Conservation Education/Outreach Activities

## **August**

- MIL booth at the 2020 Citrus Expo in North Fort Myers was cancelled due to the Corona Virus.

The MIL team also provides education and outreach services on a regular basis to individual agricultural irrigators related to evaluations performed by the MIL. The MIL continues to work on preparing and refining various PowerPoint presentations to assist in future education activities. MIL staff also designs and produces display posters that can be used in the MIL display booth. Staff spends time designing and maintaining the Collier Soil and Water Conservation District and MIL website at [www.collierswcd.org](http://www.collierswcd.org).
